RENO, Nev., June 30, 2014 (GLOBE NEWSWIRE) -- via PRWEB - Smart Fog Inc., a recognized world leader in industrial and [commercial humidification](#) systems, will join other industry leaders and technology experts at the Produce Marketing Association (PMA) Fresh Summit 2014. The Summit, to be held at Anaheim Convention Center on October 17-19, brings together players in the fresh produce market from over 60 countries, and Smart Fog Inc. are looking forward to presenting their energy efficient technology to attendees.

In an industry that's always looking ahead for the latest technological advancements, Smart Fog® De-Correlation Technology offers a practical solution to the most common problems of cold storage humidification systems, with its 4.2 micron droplets being the smallest in the industry, leading to quick and efficient evaporation. The well-considered spacing of the water droplets mean that instead of being attracted to each other (cohesion), the droplets instead oxidize into the air. This means that all Smart Fog Inc. industrial and commercial humidifiers are the non-wetting solution for the fresh produce industry. The natural de-correlation technology also makes it an ideal choice for customers looking for energy efficient solutions, and low pressure needed to operate the system means fast and easy installation.

The Smart Fog team will be on hand at booth 2199 at Fresh Summit 2014 to answer any questions and demonstrate the Smart Fog® technology.

About Smart Fog Inc.:

[Smart Fog Inc.](#) is the current world leader in industrial and commercial non-wetting humidification systems, and has been creating energy efficient solutions to meet customers' needs for over 30 years. Based in Reno, the company is proud of its commitment to evolving in response to their customers' changing requirements, and offers solutions to all types of humidification system issues, large or small.
